

SpinCo™ Incremental Magnetic Encoder System

SpinCo is an incremental magnetic encoder system designed for use as primary position and speed feedback sensor for machine tool spindles.

It consists of two key elements, a readhead and a magnetic ring.

RLS proven AMR and GMR sensor technologies are used for sensing magnetized pattern on the magnetic ring to ensure accurate and reliable operation over the entire operating range.

SPINDLE ENCODER HIGH SPEED

> ROBUST DESIGN

Features and benefits

- Speeds up to 55,000 rpm
- From 50 to 556 sin/cos periods per revolution
- ABZ digital incremental outputs with up to 4,096 steps per sin/cos period
- Analogue output signals (1 V_{pp})

- Signal stability
- IP67 protection
- Wide installation tolerances
- Small readhead size
- High accuracy

General information

The encoder continuously calibrates the sensed signals to ensure accurate and reliable output signals, which are reported as industry standard 1 V_{PP} analogue incremental signals.

The magnetic ring consists of an elastoferrite layer firmly bonded to a stainless steel hub. The elastoferrite layer is magnetised with alternating magnetic poles. The poles can be 1 mm or 2 mm long. To ensure safety and reliability even at the highest rotational speeds, all magnetic rings have a fully welded cover foil. This thin steel layer protects the elastoferrite from damage and the effects of cooling lubricant vapours and ensures optimum performance at high speeds and high temperatures. Various outer diameters are supported, ranging from 31 mm to 176 mm. The magnetic ring can be mounted by shrinkage press fitting, press fitting, gluing or by using fasteners.

The shape of the readhead has been designed to minimise the required mounting space. In addition, a visible status LED is provided to facilitate installation and troubleshooting. The readhead features an AGC that enables an optimum output signal within the installation tolerances, regardless of the ride height.

Storage and handling

Storage temperature Operating temperature Humidity $-40 \circ C$ to +85 $\circ C$ High resistance to humidity Image: temperature Image: temperature $-40 \circ C$ to +85 $\circ C$ High resistance to humidity Image: temperature Image: tempe

HANDLE WITH CARE. This encoder system is a high performance metrology product and should be handled with the same care as any other precision instrument. The use of industrial tools such as hammers and chisels or exposure to strong magnets such as a magnetic base is unacceptable and carries the risk of irreparable damage to the product.

The magnetic ring should not be exposed to magnetic field densities higher than 25 mT on its surface, as this can damage the ring.

Exposure to external magnetic fields during operation <1 mT AC (alternating field)

<2 mT DC (static field)

Readhead is ESD sensitive - handle with care.

Do not touch electronic circuit, wires or sensor area without proper ESD protection or outside of ESD controlled environment.

Packaging

Each readhead is packed individually in an antistatic bag.

Each magnetic ring is packed individually in an antistatic box.

Dimensions and installation drawings

Magnetic ring surface markings (engraved)

Magnetic ring markings include serial number, QR code, logo, part number and reference mark. They are engraved on the hub. The reference mark engraving can deviate from the actual position of the reference mark magnetization for ±5 °. The engraving is for orientation purposes only.

Installation by press-fitting

Slip the ring onto the mating shaft applying equal or uniform force along the whole ring circumference.

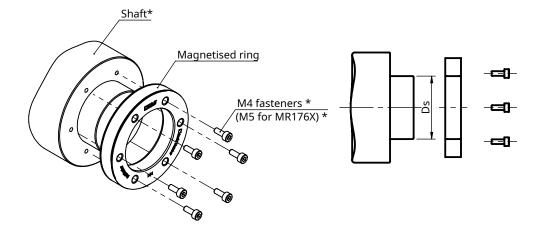

* Not provided.

Installation with fasteners

- 1.
- Slide the ring onto the mating shaft. Attach the ring with appropriate fasteners. 2.

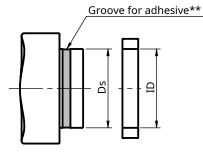

* Not provided.

See table of recommended tightening torques for RLS products (document TTD01) available at RLS media center.

Installation by gluing

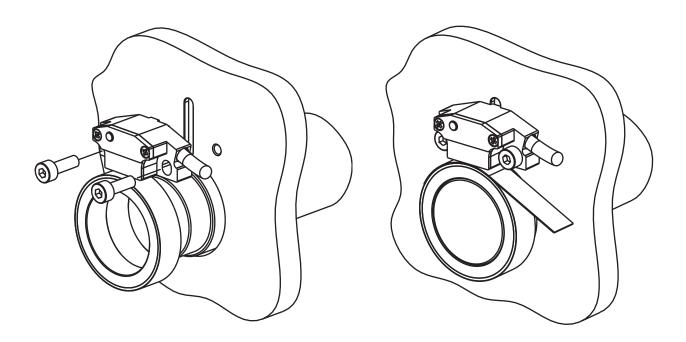

* Not provided.

** For the depth of the groove, please check the specifications of the adhesive.

Installation of the readhead

Please use the supplied spacer for optimum ride height. For proper mounting, a mounting base should be made prior to installation.

Mounting base

A **RENISHAW** associate company

Status indicator LED

LED colour	Output signals	Possible cause
Green	VALID	
		Rotational speed too high.
		Sensing distance too high.
Red	INVALID	Improper orientation of magnetised ring relative to readhead.
		Magnetically damaged magnetised ring.
		External magnetic field too high.

AGC - automatic gain control

If the strength of the magnetic field is changing, the internal AGC (automatic gain control) circuit is able to control the output signal amplitude around 1 V_{pp} . Via AGC SpinCo can monitor and keep the output signals for the ensuing sine-to-digital conversion constant regardless of changes in input signal level.

Maximum speed

For operation without errors during high speed rotation, correct edge separation setting must be selected. Edge separation can be calculated according to following equation:

Available edge separations:

В	25 ns	F	125 ns	J	400 ns	Ν	1.3 µs
с	50 ns	G	150 ns	к	550 ns	ο	1.6 µs
D	75 ns	н	200 ns	L	800 ns	Р	3.2 µs
E	100 ns	I	300 ns	м	1 µs	Q	6.4 µs

For maximum speed table refer to Maximum speed calculator for SpinCo radial magnetic rings.

Test method to confirm maximum speed:

To verify of the prescribed speeds, the magnetic rings were first exposed statically at least 5 % above the temperature characteristics for a specified time and then rotated above their prescribed speed for 1 h.

Reference signal	1 square-wave pulse Z and its inverted pulse Z–
Signal level	Differential line driver to EIA standard RS422:
	$U_{\rm H} \ge 2.5 \text{ V}$ at $-I_{\rm H}$ = 20 mA
	$U_{L} \leq 0.5 \text{ V} \text{ at } I_{L} = 20 \text{ mA}$
Permissible load	$Z_{_0} \ge 120~\Omega$ between associated outputs
Cable length *	Max. 50 m

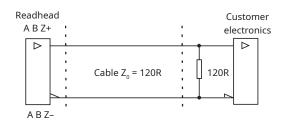

* Please consider voltage drop over cable.

Timing diagram

Complementary signals not shown

Recommended signal termination

Transient response of supply voltage

Switch-on/off behavior of the encoder:

After the switch-on time t_{on} , valid output signals are available.

 $t_{oN} = 2 s$ $U_{inmax} = U_{in} + 10 \%$, $U_{inmin} = U_{in} - 10 \%$

If the power supply is switched off, or when supply voltage falls below U_{inmin}, the output signals are also invalid.

The encoder require a stabilized DC voltage supply U_{in}. The permissible ripple content of the DC voltage is:

- High frequency interference: U_{inpeak} < 250 mV
- Low frequency ripple: U_{inpeak} < 100 mV

The limits of the supply voltage must not be violated by ripple content.

The values apply as measured at the encoder. The voltage can be monitored and adjusted with the encoders sensor lines, if available. If an adjustable power supply is not available, the voltage drop can be reduced by switching the sensor lines parallel to the corresponding supply wires.

Document issues

Date	Issue	Page	Description
28. 7. 2021	1	-	New document
20. 9. 2021	2	25, 26	List of available cable lengths amended
3. 1. 2022	3	4, 5	Additional technical drawings added
		18	Link to Recomended fastener tightening torques table added
		20	Installation tolerances table added
		21	Repeatability data added
		23	Test method to confirm maximum speed described
16. 2. 2022	4	21	Hysteresis added
2. 2. 2023	5	4	Surface markings added

This product is not designed or intended for use outside the environmental limitations and operating parameters expressly stated on the product's datasheet. Products are not designed or intended for use in medical, military, aerospace, automotive or oil & gas applications or any safety-critical applications where a failure of the product could cause severe environmental or property damage, personal injury or death. Any use in such applications must be specifically agreed to by seller in writing, and is subject to such additional terms as the seller may impose in its sole discretion. Use of products in such applications is at buyer's own risk, and buyer will indemnify and hold harmless seller and its affiliates against any liability, loss, damage or expense arising from such use. Information contained in this datasheet was derived from product testing under controlled laboratory conditions and data reported thereon is subject to the stated tolerances and variations, or if none are stated, then to tolerances and variations consistent with usual trade practices and testing methods. The product's performance outside of laboratory conditions, including when one or more operating parameters is at its maximum range, may not conform to the product's datasheet. Further, information in the product's datasheet does not reflect the performance of the product in any application, end-use or operating environment buyer or its customer may put the product to. Seller and its affiliates make no recommendation, warranty or representation as to the suitability of the product for buyer's application, use, end-product, process or combination with any other product or as to any results buyer or its customer might obtain in their use of the product. Buyer should use its own knowledge, judgment, expertise and testing in selecting the product for buyer's application, end-use and/or operating environment, and should not rely on any oral or written statement, representation, or samples made by seller or its affiliates for any purpose. EXCEPT FOR THE WARRANTIES EXPRESSLY SET FORTH IN THE SELLER'S TERMS AND CONDITIONS OF SALE, SELLER MAKES NO WARRANTY EXPRESS OR IMPLIED WITH RESPECT TO THE PRODUCT, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, WHICH ARE DISCLAIMED AND EXCLUDED. All sales are subject to seller's exclusive terms and conditions of sale which, where the seller is (a) RLS Merilna tehnika d. o. o., are available at https://www.rls.si/eng/salesterms, (b) Renishaw, Inc., are available at https:// www.renishaw.com/legal/en/--42186, or (c) another person, are available on request, and in each case, are incorporated herein by reference, and are the exclusive terms of sale. No other terms and conditions apply. Buyer is not authorized to make any statements or representations that expand upon or extend the environmental limitations and operating parameters of the products, or which imply permitted usage outside of that expressly stated on the datasheet or agreed to in writing by seller.

RLS Merilna tehnika d. o. o. has made considerable effort to ensure the content of this document is correct at the date of publication but makes no warranties or representations regarding the content. RLS Merilna tehnika d. o. o. excludes liability, howsoever arising, for any inaccuracies in this document. © 2023 RLS d.o.o.
