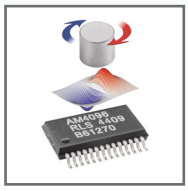
RMC22 commutation and incremental encoder solution / complementary sinusoidal outputs



The RMC22Ux is designed for use in motor feedback applications requiring both A, B, Z incremental and U, V, W commutation signals. The RMC22BC provides analogue complementary sinusoidal outputs.

Robust non-contact OnAxis™ sensor technology provides ultimate long term reliability and with simple installation costs of ownership are minimal.

Installation is simplified with a range of magnetic actuators and mounting options for the encoder. A simple one time zero position programming then removes the need for careful adjustment of the encoder.

Resolutions are available from 256 to 1,024 pulses per revolution (1,024 to 4,096 counts per revolution with ×4 evaluation). U, V, W commutation signals are simultaneously output with 1 to 8 pole pairs (2 to 16 poles).

- **Incremental resolution up to 4,096 cpr**
- **Simple installation and setup**
- **U, V, W commutation signals with up to 16 poles (±24 mA output drive)**
- **Industry standard incremental outputs (RS422)**
- **Operating speed to 30,000 rpm**
- **Compact - 22 mm diameter body**
- **Non-contact, frictionless design**
- **Low inertia**
- **IP40**

Connector type
Molex 501568-1107
Mating connector (Not provided)
Molex 501330-1100 (crimp terminal 501334-xxxx)

Installation procedure

1. Install the magnetic actuator

Use glue to fix the magnetic actuator to the shaft (recommended LOCTITE 648 or LOCTITE 2701). Actuator should protrude by 7 mm.

2. Install the flange with the encoder module on the mounting surface

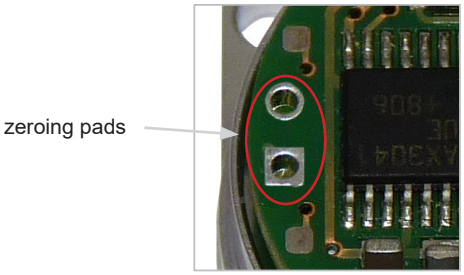
Screw the flange to the mounting surface using 2 screws (not provided).

3. Turn the power on

Plug in the mating connector and turn on the power.

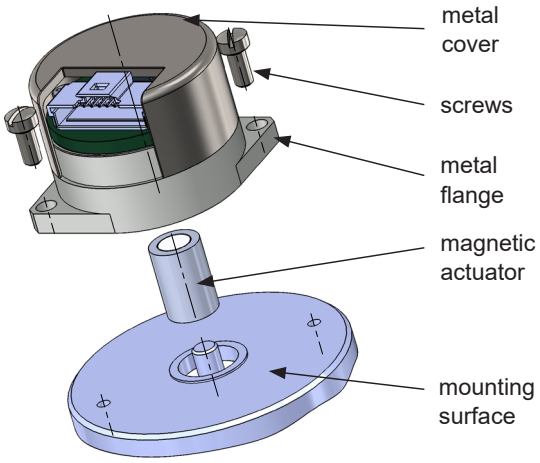
4. Zero the UVW signals

Move the motor to the required zero UVW position. Short together the two zeroing pads.



5. Cover the encoder with the metal cover

Place the metal cover over the encoder and gently press it in position. Be sure to align the opening with the connector.



Zero function

All the outputs can be zeroed at any angle. The first rising edge in the U signal will be reset at this point of zeroing as well as the position of reference impulse for incremental outputs.
