## News from RLS

*March 2017 - for immediate release*

### **RLS launches new Demonstration and Learning Centre of Advanced Technologies**

RLS, the global rotary and linear magnetic sensor manufacturer, has opened a new Demonstration and Learning Centre of Advanced Technologies on 8th March, 2017 in Komenda, Slovenia. The new facility provides a secure development environment in which customers can expand their knowledge and confidence using precision measurement and process control tools.

#### **Providing knowledge and experience**

The Centre provides cost-effective access to machinery, facilities and engineers knowledge. It is equipped with a range of latest Renishaw technology including Revo 5-axis scanning head on a CMM machine and Equator™ gauging system combined with a robot to demonstrate off-machine gauging in an automated production line. The Centre provides a confidential development environment in which companies can explore the benefits that Renishaw process control solutions can bring to their processes, and build their knowledge and confidence in precision measurement by attending the Renishaw Training Academy.

#### **Solutions to stay competitive in global market**

»The Centre demonstrates best practice examples in process automation that allows companies to stay competitive in global markets,« says Simon Smolnikar, the Regional Sales Manager at RLS. Tone Vrečič, RLS Sales Manager for Renishaw programme sees the opportunity for companies to modernize their production: »We decided to open the Centre to get our customers introduced to Renishaw advanced technology. But our main goal is to offer training. The Renishaw Training Academy offers over 70 modular courses that can be adapted to any user based on their experience and interest.«

RLS is a world leader in the development of high performance magnetic encoder feedback solutions and together with its associate company Renishaw offers worldwide sales and technical support.
